

the *Book of Nut* star calendar is not an 'improvement' of the diagonal star clock but is closely related to the precursor of the diagonal star clock: a list of stars which disappeared for seventy days.

Enūma Anu Enlil Tablets 1-13*

Lorenzo Verderame, Rome

The first thirteen tablets of the astrological series *Enūma Anu Enlil* (EAE),¹ together with Tablet XIV,² a sort of astronomical compendium, are a homogeneous and autonomous group inside the series itself, and are considered to be a sub-series with a name of its own, IGI.DU₈.A.ME šá 30 "visibilities of the moon". This sub-series deals with phenomena associated with the appearances or visibilities of the moon, as suggested by the title. In particular, most of the omens deal with the first appearance of the moon and contain in the protasis the expression *ina* IGI.LÁ-šú (*ina tāmartišu*) "at its appearance".

The Babylonians considered two days to be particularly noteworthy in the month:³ the first day, new moon, and the 14/15th day, ideal full moon; since the latter also concerned lunar eclipse phenomena, extensively treated in the Tablets XV-XXII of EAE, the 14/15th day is rarely mentioned in Tablets I-XIII.⁴

Even the darkening of the moon, generally denoted by the verb *adāru*, that usually indicates eclipses, that are the main topic of EAE XV-XXII, are rarely attested in tablets I-XIII.⁵ The use of the verb *ekēlu* "to be dark" in the incipit of

* This paper is part of a more general study about the Tablets EAE I-XIII, that will be published soon; see VERDERAME (2002). I would like to thank John Steele and Christopher Walker for the invitation to participate in UOS meeting. I would also like to thank Christopher Walker, together with the Authorities of the British Museum and the staff of the Student Room, for the assistance given to me in the Student Room in this last three years; David Brown, Salvo de Meis, Sveva Mazzini, who read this text in its early phases and who made many helpful suggestions concerning its content. Any errors found herein are my own.

¹ For a general reconstruction of the series see WEIDNER (1941–1944; 1954–1956; 1968–1969). For editions of celestial omens from EAE see GEHLKEN (2000); LARGEMENT (1957); REINER and PINGREE (1975, 1981, 1998); AL-RAWI and GEORGE (1991–1992); VAN SOLDT (1995); ROCHBERG-HALTON (1985).

² WEIDNER (1941–1944), pp. 317–318; AL-RAWI and GEORGE (1991–1992), pp. 52–72; HUNGER and PINGREE (1999), pp. 44–50.

³ LANDSBERGER (1915), pp. 99ff; STOL (1992), pp. 245–250; COHEN (1993), pp. 3ff.

⁴ Notice that omens concerning the visibility of the moon and sun on day 14, 15, etc. (DIŠ 30 u 20 *im-taḥ-ru-ma*, *šit-qu-lu*, *šu-ta-šu-ú*, *šu-ta-tu-ú*, KI *a-ḥa-meš* IGI.MEŠ, etc.), well known from the Reports and commentaries, are very rarely from Tablets I-XIII, except for an omen concerning the moon and sunlight, DIŠ 30 u 20 UD.DA-*su-nu du-ú-mat* (Tablet I: 82-3-23, 16 + Rm 151/2Sp2 + Sp8: r.34, and Sm 955: r.11'; Tablet VI: K 1348 + Rm 591/2Sp3+Sp10: 11').

⁵ For *adāru* (KAXMI) in EAE I-XIII, see e.g. K 2311 + 3624 (Sp1): 1-8; K 6570: 1-4, both belonging to Tablet II; VAT 7813 (WEIDNER (1941–1944), Pl.XIII): 1 (incipit of Tablet IV, see Uruk Cat.: 4). The verb *da'āmu* (DARA₄) refers principally to luminous phenomena, as

Tablet II,⁶ suggests that the main topic of this Tablet was the darkening of the moon; nevertheless *ekēlu* is employed chiefly in connection with luminous phenomena⁷ and does not indicate the darkening resulting from eclipse as is the case with the verb *adāru*.⁸

The first appearance of the crescent, that is the beginning of a new lunar month, is preceded by a period of lunar absence (*ūm bubbuli*/U₄.NÁ.ÀM),⁹ a time of danger and death. The transitional character of the month's last day is also emphasized in the hemerologies and in many passages from literary texts: in this day Sin and Šamaš are in council and take decisions. An anticipated or delayed visibility of the crescent, that is to say, an irregularity in the standard length of the month, 30 days,¹⁰ is considered inauspicious.¹¹

Tablet I begins, after the Sumerian and Akkadian introduction,¹² with phenomena that happen in the days between the moon's disappearance and the new moon, i.e. from the 27th of a month to the 2nd of the next month.¹³ The Babylonian observer watched at the early or irregular (*ina lā simānišu, ina lā adanni-šu, ina lā minātišu*/ŠID.MEŠ-šu)¹⁴ appearances of the moon, at the shape and number of the

the *šētu*/UD.DA or the *agū*/AGA; rarely to the moon (Tablet VI, K 1348 + Rm 591/2Sp3+Sp10: r.44, DIŠ 30 *ina Ē-šu DARA₄*) or its horns (Tablet VIII, K 2267+/2Sp1a: iii 3 // TU17: 14, DIŠ SI.MEŠ-šu DARA₄.MEŠ-*ma* MUL.*Is le-e ana IGI-šu* GUB).

⁶ Uruk Cat.: 2, 30 *ina IGI.LÁ-šu e-kil* "the Moon is dark at its appearance".

⁷ Referring to the light of the moon (*šētu*/UD.DA), e.g. DIŠ UD.DA 30 (*ma-gal*) *ek-lel*, in Tablet I (82-3-23, 16 + Rm 151/2Sp2 + Sp8: r.29'; Sm 955: r.7'; LBAT 1527: r.15'), VI (K 1348 + Rm 591/2Sp3+Sp10: 13') and VIII (TU 17: 29; LBAT 1529: 11'; K 2267+/2Sp1a: iii23'; K 3741b: 4'); to the appearance of the day, e.g. *u₄-mi ek-le-tu* (Sm 751/Sp15: r.3), or of a planet/constellation, e.g. REINER and PINGREE (1998), pp. 218–219 l. 51 (MUL.ŠU.PA *e-kil*) and SAA8 502: 14 (DIŠ MUL.GÍR.TAB *i-da-tu-ša uk-ku-la*). crescents (*uskāru*/U₄.SAKAR),¹⁵ and at the appearance of the lunar light (*šētu*/UD.DA).¹⁶

Most of the phenomena treated in the Tablets I–XIII are, however, atmospheric. Halos, "crowns", shapes and colours of the moon are phenomena caused by ice crystals, water particles, and dust present in the atmosphere. Most of the omens concerning atmospheric phenomena, describe in the protasis the visibility of the moon, whether or not it is obscured by clouds (IM.DIRI) or by a *šabīhu*,¹⁷ or the aspect of the moon's light (*šētu*/UD.DA), whether it is faint (*unnutu*) or bright (*ba'ālu*/ZÁLAG), dark or made up of different colours.¹⁸

Another atmospheric phenomenon is that of the lunar halos (*tarbāšu*/TÜR): one or more luminous circles that encircle (*lamú*/NÍGIN) the moon caused by refraction and reflection of light passing through ice crystals in the atmosphere.¹⁹ The lunar halos are the main topic of Tablets X–XII, but are also treated in other tablets (VIII and IX).²⁰ Tablet VIII deals in general with halos that could happen from month VI to month XII; particular attention is paid to the presence of one or more halos²¹ and to the different colours they might have. The presence inside the halo of an opening ("gate", *bābu*/KÁ)²² or of a heavenly body²³ are the topic of Tablet X. Undoubtedly,

²⁰ See also Iqur Ipuš §79 and 80.

²¹ Tablet X reports cases of two, *libbānu*/ŠĀ-nu "inner" (K 2887/2Sp15: 3', 5', 7'; K 200+/Sin10 + 2Sp14: r.22', 30'; 81-7-27, 96: 4'-6'; CT51 143: 18', r.5') and *kidū* "outer" (K 2887/2Sp15: 9'; K 200+/Sin10 + 2Sp14: r.22', 30', 31', 40'; 81-7-27, 96: 7'; CT51 143: 18', r.5', 6', 14'), or three halos (K 2887/2Sp15: 3', 5', 7', 10', 13', 16', 17'; K 200+/Sin10 + 2Sp14: r.23'; 81-7-27, 96: 5'; CT51 143: 19'), 1 "first" (22°), *šanū*/2-ú "second" (46°) and 3-*šū* "third" (90°).

²² DIŠ 30 TÜR ... NÍGIN-*ma* KÁ *ana* IM.x BAD (*petū*) / KUD (*parāsu, nakāsu*); also the absence of this opening is recorded in the omina of Tablet X: DIŠ 30 TÜR ... NÍGIN-*ma* KÁ NU TUK, quoted in Iqur Ipuš §79. K 2887 (2Sp15): 3', 10', 13', 16', 17'; K 2398 (Sp21): 2'-20'; K 200+ (Sin10 + 2Sp14): 8'-51', r.1-5', 33'-40'; 81-7-27, 96: 8', 10', 12'; K 2140: 2'-8'; K 10731: 1'-6'; K 13786: 1'-6'; CT51 143: 8'-14'; LTTN 4: r. i3-23; Sin24: 59-69.

halos were dealt with in Tablet IX and, perhaps, in Tablet XI, judging by their incipits²⁴ and their closeness to Tablet X. These two Tablets are difficult to restore at present, but the *supūru*/AMAS or “great halo”,²⁵ together with the *ušurtu*/GIŠ.HUR²⁶ could be the topic of the fragmentary Tablets IX or XI.

The *agū*/AGA, lunar “tiara” or crown, is the main topic of Tablet III. The term *agū* refers to at least two, maybe, three different phenomena:²⁷ 1) earthshine; 2) cloud-banks that encircle the moon as headgear; 3) the hypothetical meaning of “full moon”. The omens’ protases note the *agū*s number and colours, besides the interaction with atmospheric phenomena (clouds, storm, etc.) and heavenly bodies. The *agū*, conceived as headgear (tiara or crown) of the moon, is imagined to be made up by different metals and materials.²⁸ It is also compared with objects²⁹ and, in a way less understandable to us, with abstract concepts.³⁰

²⁴ Tablet IX: 30 *ina* IGI.LÁ-šú TÜR NIGIN-*ma* *ka-bar* *u* *šu-par-ru-ur* “The Moon at its appearance is surrounded by a halo and it is large and extended” (Uruk Cat.: 9).

²⁵ DIŠ 30 AMAS NIGIN-*ma* *id-lip* *na-da-nu* *pa-le-e* *ana* LUGAL šá TÜR *ra-bu-ú* NIGIN-*ma* “If the moon is surrounded by a sheepfold and lingers on: giving of the reign to the king. I.e., it is surrounded by a large halo” (SAA8 494: 7-9). Any of the fragments belonging to EAE I-XIII treats the *supūru*/AMAS, well known from other sources (BM 38295: r.1; BM 38160: r.2; BM 26185: r.5; Sin 16: 1ff., 3 : 131-134, 24 : 10; LTTN 1: 3-6; Iqur Ipuš §80; SAA8 494: 1-2, 7-9); see CAD S sv *supūru* mng. 2, p. 398. Cf. the epithet of Sin “the Lord of the horn (and) the halo” (EN *qar-ni* *su-pu-ri*) in a babylonian hymn, LANGDON (1915), p. 191, l. 7; STOL (1992), p. 255.

²⁶ The *ušurtu*, lit. “design”, is a light phenomenon that encircle the moon, perhaps an halo; Cf. Iqur Ipuš §77, 77’, 78, 80. For the cruciform shape of the *ušurtu* on the basis of K 4336: i18 (WEIDNER (1941–1944), pl. 7: i18), [*iš*]-*pal-lu-ur-tú* : *ú-šur-tú*, see LARGEMENT (1957), pp. 262f.; REINER (1974), pp. 258–259, n.14; ROCHBERG-HALTON (1985), pp. 156f. and note 4.

²⁷ CAD A₁ sv *agū*, pp. 153-4, i.e. mng. 2a 1’-3’. WEIDNER (1911), pp. 24–52; STOL (1992), pp. 249–250; BROWN (2000), p. 89, n.226.

²⁸ KÜ.BABBAR “silver”; KÜ.GI “gold”; ZABAR “bronze”; URUDU “copper”; AN.NA “lead”; etc. See Tablet III: K 6984+ (Sp2): r.3-5, 8-10; K 6276 (Sp3): 4-9; K 4768 (2Sp17): 3, 7-12; K 6291 (2Sp17): 8, 12-18; K 11244: 5-7; K 3855 (Sin20): 4.

²⁹ SAGŠU “turban”; GIŠ.GIDRI “scepter”. See Tablet III: K 6984+ (Sp2): r.9; K 10608 (Sp4): 2; K 2890 (Sp5): r.5-7; BM 32373: 6; LTTN 1: 2.

³⁰ NĪG.HA.LAM.MA “destruction”; *šaggaštu* “slaughter”; *šagaltu* “homicide”; *šaqummatu* “mourning”; *šalummatu* “terrifying splendor”; *da’ummatu* “darkness”; HĒ.NUN “abundance”; MĒ “battle”; *mēšaru* (NĪG.SI.SÁ) “justice”; *uzzu* “anger”; *ummatu* “heat”. See Tablet III: K 2311 + 3624 (Sp1): 28, 31-35; K 6984+ (Sp2): r.13-14; K 6276 (Sp3): 3, 13, 15, 17; K 10608 (Sp4): 1, 6-7; K 2890 (Sp5): r.8-9; K 4768 (2Sp17): 6; K 6291 (2Sp17): 11, 20,

Many tablets deal with aspects of the moon’s horns (*qarnu*/SI), but this is the central topic of Tablet V and most of Tablet XII. The horns phenomena concern mostly their shape: they could be, principally, pointed (*edēdu*³¹) or blunted (*kepū*³²), stretched (*tarāšu*³³), turned toward the ground or the sky (lit. “look/pierce the ground/sky”, KI/AN IGI³⁴/terū³⁵), otherwise they reach (*kašādu*³⁶) or touch (*nenmudu*³⁷) each other. More difficult to interpret are phenomena that appear to be impossible, and so to be imagined. We have two solutions for these eventualities: either we do not understand yet what the scribe really meant when he used these expressions, or we refer to the Mesopotamian tendency towards completion, the result of which is a list of phenomena that never could happen in nature.³⁸

Other kinds of phenomena are astronomical: the vicinity and conjunction (occultation) of heavenly bodies (planets, stars and constellations) by the moon.³⁹ Examples of this kind of phenomena are scattered throughout EAE, they are systematically treated in Tablet VI and in some way also in Tablets III and XII. Tablet VI is divided into sections that correspond to a heavenly body⁴⁰ particularly in different positions next to the moon.⁴¹

SIPA.ZI.AN.NA (Orion; K 5281/Sin21: 5’-6’; K 3773/2Sp9a: 7’-8’; K 3556/2Sp11a: 7’-8’; Sm 1148: 7-8; K 9966: 2’-

Little is preserved of some Tablets of the IGI.DU₈.A.ME sub-series. We therefore do not know which other phenomena were treated. In particular, regarding Tablet XIII, the last one of the astrological type of the IGI.DU₈.A.ME sub-series, not even incipit is preserved in the Uruk Catalogue. Significantly the sub-series IGI.DU₈.A.ME ends with Tablet XIV, which contain “tables giving schemes for, among other things, the lunar cycle”;⁴² a Tablet that, situated at the end of this sub-series, constitutes a kind of useful appendix.

Abbreviations

CT = Cuneiform Texts from Babylonian Tablets in the British Museum. London:

British Museum Publications. 1896–

Iqqur Ipuš = LABAT (1965)

LBAT = SACHS (1955)

LTTN = WISEMAN AND BLACK (1996)

SAA8 = HUNGER (1992)

Sin = VIROLLEAUD (1908)

Sp = VIROLLEAUD (1910)

2Sp = VIROLLEAUD (1912)

STT = GURNEY and HULIN (1964)

TU = THUREAU-DANGIN (1922)

Uruk Cat. = Uruk Catalogue (VAT 7814 + AO 6470), see WEIDNER (1941–1944), pl. I
